# Machine Learning Final Exam

Aleksandr Petiushko

ML Research

### Content

• Exam information

### Content

- Exam information
- 2 Exam problems

#### Exam information

- Exam format: hand-written on paper
- Exam duration: 1.5 hrs
- Materials allowed to be used: hand-written notes (1 sheet of paper)
- No one is allowed to use either the phone, laptop or printed materials
- Exam parts:
  - ML Pipeline Design: 60%
  - 2 Short questions about the course content: 20%
  - 3 Simple ML-related calculations: 20%

# Time for questions

## Exam topics: ML pipeline design

Demonstrate the ability to design the ML pipeline for any given problem. It should consist (but not limited to) of the following sub-steps:

- Clear ML task statement
- Data collection strategy
- Data preparation routines
- Model and loss function design
- Success metrics and eval procedure
- Model selection approach

A. Petiushko Exam 5 / 8

## Exam topics: ML concepts

Demonstrate the deep knowledge of the following ML concepts:

- Supervised Learning, types of models (high-level)
- Input feature types and dimensionality
- Empirical vs Structural Risk Minimization
- Overfitting vs Underfitting and methods to avoid them
- Cross-Validation
- Model Selection pipeline and why it is important
- Classification vs Regression
- Classification and Regression loss functions
- Classification quality metrics (including accuracy, precision, and recall)
- Regression quality metrics (including MAE, MSE, and RMSE)
- Binary vs Multi-class Classification
- Micro- vs Macro- Averaging for Multi-class Classification
- L1 (Manhattan) and L2 (Euclidian) norms (distances)
- k-NN Classification and k-NN Regression
- Linear Regression: Ridge, LASSO, and Elastic variants

4 D > 4 D > 4 D > 4 D > 3

A. Petiushko Exam 6 / 8

## Exam topics: ML calculations

Additionally, to be able to compute auxiliary things like:

- TP, FP, FN, TN
- TPR, FPR, FNR, TNR
- MAE, MSE, RMSE
- Accuracy, Precision, Recall
- Empirical Risk
- L1 (Manhattan) and L2 (Euclidian) norms (distances), and simple equalities/inequalities based on them

**⊚AP** 

A. Petiushko Exam 7 / 8

# Thank you all!
